

Juniper Green

Two players.

Take turns crossing out one number from the board below. First number must be an even. Then each number must either be a factor or multiple of the previous player's choice. The first player who can't cross out a number loses. Work out a winning strategy.

Or you can play cooperatively and see how many numbers you can cross out.

(The name – Juniper Green – is the name of the school where the game was invented)

1	2	3	4	5	6	7	8	9	10
11	12	13	14	15	16	17	18	19	20
